

Lesson 3- Assignment 01 - Push and Pull Changes

Solution

Execute the following steps:

- Create an account in GitHub, add a new repository manually from an existing local repository (**use git add remote & git push**)
- Update the file in the remote repository and pull (**git pull**) into local
- Update the file locally and commit it and later push (**git push**) into remote repository
- Verify that the commit history is consistent across local and remote repositories
